To whom it may concern,

I am writing to confirm that **Dr Tatiana Zúñiga-Burgos** contributed to the *Naked Clams* research project through an academic collaboration with the **Department of Zoology, University of Cambridge**, working under my supervision.

During her appointment as **Technical and Communications Officer** at the **Algal Innovation Centre, University of Cambridge** (2024–2025), Dr Zúñiga-Burgos undertook nutritional and biochemical characterisation of juvenile naked clam biomass (*Teredo navalis*) produced under different algal feeding regimes.

Her responsibilities included the coordination and delivery of laboratory analyses, including **Fourier Transform Infrared Spectroscopy (FT-IR)**, **Gas Chromatography–Mass Spectrometry (GC-MS)** for lipid and fatty-acid profiling, and **vitamin B12 bioassays** to assess nutritional composition. She also compiled, analysed, and interpreted the resulting datasets and produced technical reports summarising methods, results, and key findings. These reports were provided to our Department of Zoology team and supported ongoing research on alternative marine protein sources and sustainable aquaculture systems.

This letter is issued at Dr Zúñiga-Burgos's request for certification purposes.

Yours sincerely,

Dr David Willer
