Quality oriented drying of Lemon Balm
(Melissa officinalis L.)

Universität Kassel
Fachbereich Ökologische Agrarwissenschaften
Fachgebiet Agrartechnik
Prof. Dr. Oliver Hensel

Quality oriented drying of Lemon Balm
(*Melissa officinalis* L.)

Dissertation zur Erlangung des akademischen Grades einer
Doktorin der Agrarwissenschaften (Dr. agr.)

von
Dipl.-Ing. Sandra Patricia Cuervo-Andrade
aus Bogotá, Kolumbien

2011

Die vorliegende Arbeit wurde vom Fachbereich Ökologische Agrarwissenschaften der Universität Kassel als Dissertation zur Erlangung des akademischen Grades „Doktorin der Agrarwissenschaften“ angenommen.

Tag der mündlichen Prüfung: 21.03.2011

Erster Gutachter: Prof. Dr. Oliver Hensel

Zweiter Gutachter: Prof. Dr. Werner Hofacker

Mündliche Prüfer: PD Dr. Jens Gebauer
PD Dr. Johannes Kahl

Acknowledgements

This work was developed in the department of agricultural engineering at the University of Kassel in Witzenhausen led by Prof.Dr.Oliver Hensel.

I particularly want to thank to Prof.Dr. Oliver Hensel for his continued support in carrying out the work. His technical suggestions were crucial to the successful conclusion of the work. His good sense of humor always kept me motivated to continue and overcome the difficulties inherent in the research.

I also want to thank to Prof.Dr. Werner Hofacker , to PD Dr. Jens Gebauer and to PD Dr. Johannes Kahl for their participation in the supervisory committee.

A special gratefulness to the STIBET scholarship program for their financial support for the latest stage of my doctoral work.

Special thanks to the members of the department of agricultural engineering in Witzenhausen, for their contributions and help during my stay in Germany, mainly to Christian, Heiko, Petra, Uwe and Franz.

I appreciate the support of my friend Mr. Christian Schellert, who helped me both in technical and personal aspects during my stay in Witzenhausen.

I thank to my friends for the support and to share cheerful times during my stay and that of my family in Germany. Especially to Sonia, Alexander, Javier, Esteban, Achim, Beatriz, Hernando, Victor and Yolanda.

I thank my parents Socorro and Dionisio who have always offered me their support to achieve my formation goals. Also I want to thank to my husband Carlos Julio whose support was fundamental for the development and culmination of this project. Thanks to my children Juliana Patricia and Sebastian Camilo for their patience, great support and motivation also for the whole time that they have given me of their company to finish this work.

Contents

1	Introduction	3
2	Problem outline	5
2.1	Background	5
2.2	Problem definition	6
2.3	Research objectives	8
2.4	Methodology	9
3	State of the Art	11
4	Fundamentals	15
4.1	Importance and purposes of drying	15
4.2	Drying process	15
4.3	Water activity and sorption isotherms	17
4.4	Kinetics of the drying	18
4.5	Characteristics of Lemon Balm	23
4.5.1	Uses of Lemon Balm	24
4.5.2	Loss of essential oil	24
4.5.3	Color change of leaves by drying	25
4.5.4	Quality attributes of Lemon Balm	25
5	Measurement of quality characteristics	27
5.1	Moisture Content Determination	27
5.2	Essential oils content	27
5.3	Measurement of Color	28
6	Experimental determination and mathematical fitting of sorption isotherms	31
6.1	Materials and methods	31
6.2	Results	34
6.3	Mathematical models evaluation	35
6.4	Analysis of results	37
7	Drying kinetics	43
7.1	Materials and methods	43
7.2	Results and discussion	45
7.2.1	Influence of air drying temperature	45
7.2.2	Influence of relative humidity	49
7.2.3	Drying behavior for different conditions of the product	50
7.3	Fitting to mathematical models	51
7.4	Behavior of the leaves temperature	54

8	Drying by using stepwise process control	55
8.1	Description of the process	55
8.2	Materials and methods	56
8.3	Results and discussion	58
8.3.1	Drying curves	58
8.3.2	Influence of temperature on drying time	61
8.3.3	Effects of drying on essential oil content	62
8.3.4	Effects of drying on color difference	63
8.3.5	Energy consumption	64
8.3.6	Process recommendation	66
9	Multiobjective optimization of drying process	67
9.1	Materials and methods	67
9.2	Experimental design and response surface methodology (RSM)	68
9.3	Regression models	72
9.3.1	Drying time	72
9.3.2	Color difference	75
9.3.3	Essential oil content	77
9.3.4	Required energy	79
9.4	Multiobjective process optimization	81
9.4.1	Drying time as priority	83
9.4.2	Essential oil content as priority	85
9.4.3	Color difference as priority	86
9.4.4	Required energy as priority	88
9.4.5	Same priority for all responses	89
9.4.6	Quality characteristics as priorities	91
10	Effect of solar drying parameters on quality characteristics	95
10.1	Description of process and equipment	95
10.2	Materials and methods	97
10.3	Experimental design	98
10.4	Results and discussion	100
10.4.1	Drying time	100
10.4.2	Color difference	103
10.4.3	Essential oil content	104
10.5	Regression models	107
10.5.1	Drying time	107
10.5.2	Color difference	110
10.5.3	Essential oil content	113
11	Overall discussion	117
11.1	Sorptions isotherms	117
11.2	Drying kinetics	117
11.3	Drying by stepwise	118
11.4	Optimization of drying	119
11.5	Solar drying	120

12 Summary	121
13 Zusammenfassung	123
Bibliography	125
A Chi-square test and determination coefficient	137
B Polynomial regression in multiobjective optimization of drying process	138
C Regression models for quality characteristics in solar drying	142
C.1 Drying time	143
C.2 Color difference	143
C.3 Essential oil content	144
